- 13th salary
- special rewards
- laptop
- mobile phone
- education
- company-wide team building
- technical workshop
- work in a super team

Brief characteristics of the company

- TESLA Blue Planet - Member of TESLA Group
- Thanks to our own calculation and optimization models, we design functional, comprehensive, fully integrated product solutions for the production and storage of environmentally friendly, emission-free energy directly at the point of consumption. We build integrated microgrids, community power plants and energy infrastructure optimized for large-scale electromobility.
- We convert solar energy or wind into electricity, which we efficiently store in the battery storage systems we develop and use at the time of the highest consumption. Or we convert it into hydrogen, which can be used directly in vehicles, or partial storage for conversion back into electricity.
- We are thus bringing a new energy infrastructure that is more efficient, safer, cheaper and friendlier to our Blue Planet. An energy infrastructure that supports sustainable local communities while being easy to use and looking good.
- We bring energy for a better life...
